**Accepting Chronic Disease Prevention Grant Funds and
Amending the 2019 Rock County Public Health Department Budget**

Executive Summary

In 2017, Rock County's community health coalition, the Health Equity Alliance of Rock County, completed a community health assessment and community health improvement plan. The assessment and improvement plan identified obesity as a priority health challenge and as a contributor to chronic disease and other poor health outcomes in Rock County.

The Wisconsin Department of Health Services (DHS) was awarded a 4.75 year cooperative agreement from the Centers for Disease Control and Prevention (CDC). This grant supports state health department investments in implementing and evaluating evidence-based strategies to prevent and manage cardiovascular disease (CVD) and diabetes in high-burden populations/communities, contributing to improved health outcomes.

As part of this grant funding, the Rock County Public Health Department has been awarded \$30,000 to provide leadership for diabetes and heart disease prevention and management. Based on the Public Health 3.0 model, local health departments/coalitions can play a unique role as Chief Health Strategist. This role includes developing and/or strengthening strategic partnership, using a data to inform decisions and identify health disparities, engaging populations at greater risk of diabetes and heart disease, using a health in all policies approach, communication and awareness and evaluation.
